1. Click on File -> Make a copy

Include your IPO Chart with your code in Eclipse IDE: We will discuss and demonstrate this in the computer lab.

IPO CHART

Program name:	[AddCoins]	
INPUT	PROCESS	OUTPUT
Hint: What will the user input?	Hint: What is the program going to do with the input information?	Hint: What will the screen display after user input?
[The user will input their number of pennies, nickels dimes, and quarters.]	[The program will take all the pennies nickels dimes and quarters and calculate the total by multiplying the number of quarters, dimes, pennies and quarters, by their actual dollar amount because the user is just inputting how many they have not the actual amount so for example quarters is just how many quarters they have multiplied by 0.25 their actual dollar amount then it adds them all together to get how much money they have in coins]	[The output will be "You have : \$x dollars" x being for the amount of dollars they have]
