

Credit Name: CSE 2110 Procedural Programming 1

Assignment Name: MetricConversions

Describe the errors you've encountered while working on this assignment. What caused the error and how do you overcome the error?

```
7 //calculations to turn x into y
38 public static void inchestocentimeters(Scanner scanner) {
9     System.out.print("Enter your inches: ");
0     double inches = scanner.nextDouble();
1
2     double inch = (inches * 2.54);
3
4     System.out.println(inches + " inches = " + inch + " centimeters");
5 }
```

I was confused why it was an error for inch but realized that i needed another + symbol to connect the "inches" to the inch variable

```
38
39
40 //the menu
41 public static void displayMenu() {
42     System.out.println("Please choose one of the following conversions"
43         + "1. Inches to Centimeters");
```

I wanted my menu to have spaced between each line and i thought this was the way to do it but it wasnt so i changed it to different println statements which makes more sense
