w has your pr	ogram changed fro	om planning to co	oding to now? Plea	ise explain?														
first i was plan	ning to use if state	ements instead o	f the switch case s	tatements that i	did but i realized h	ow much longer it	d be if i did "if use	rinput == x" then	do the equation ar	nd print the value	over and over again for 8 different of	conversions so i iu	st sticked with a c	ase statement and	d in my opinion it	was way shorter	and saved me more	e time
