Credit Name: CSE 2120 Data Structures 1

Assignment Name: palindrome

How has your program changed from planning to coding to now? Please explain?

When planning the program it was pretty simple to me i just had to ask the user for their word and then clean the string and then reverse the word to make sure it was the same backwards and is it read the correct way, thats what a palindrome is. to test the code i already knew a palindrome so i used the word "racecar" or "mom" to make sure that it was getting them correct and i also used other words like "mom" or "poop" and then for incorrect palindrome
